

The following two screenshots are the output of program 1b

1. PingPong abc 100 ; PingPong xyz 100 ; PingPong 123 100 ;

The image shows a Visual Studio Code editor window with a C program named 'Shell.java' (though the code is in C). The code is a multi-threaded program using pthreads. It defines a 'PingPong' struct and a 'PingPongThread' function. The main function creates several threads, each calling 'PingPongThread' with different arguments. The terminal output shows the execution of the program, displaying thread IDs and the output 'PingPong xyz 100; Pingpong 123 100;'. The status bar at the bottom indicates the file is 'SSH: csstab7.uwb.edu' and the current line is 52, column 52.

2. PingPong abc 100 & PingPong xyz 100 & PingPong 123 100 &

[illegible]
